🎓 VIT Smart Chatbot 🤖

Welcome to the **VIT Smart Chatbot**, a simple yet interactive Python-based chatbot designed to help users with basic college-related queries such as fee structure, general information, and more. This project is beginner-friendly and works without any internet connection.

📌 Project Overview

The VIT Smart Chatbot is a **rule-based chatbot** that simulates conversation with users. It responds to predefined inputs and provides useful information in a clear and simple way.

This project is perfect for beginners who want to learn:

- Basic Python programming
- Conditional statements
- Loops and user interaction
- Simple AI concepts (rule-based systems)

✨ Features

The chatbot can respond to the following user inputs:

- 👋 **Greetings** → Say "hi", "hello", "hey"
- 🙋 **Name Input** → "My name is ___"
- 💰 **Fees Information** → Type "fees" and choose category (1–4)
- 🏠 **Hostel Info** → Type "hostel"
- 📚 **Courses Offered** → Type "course"
- 💼 **Placement Info** → Type "placement"
- ⏰ **Current Time** → Type "time"
- 🧮 **Calculator** → Type "calculate 5+3"

- 😊 **Basic Conversation** → "how are you"
- ❌ **Exit Program** → Type "exit"

🧠 How It Works

The chatbot uses:

- if-elif conditions to understand user input
- A loop (while True) to keep the conversation running
- Predefined responses for different queries

It does **not use advanced AI**, but follows a **rule-based approach**, making it ideal for learning purposes.

💻 Technologies Used

- Python 🐍
- Basic libraries:
  - random (for greeting messages)
  - time (for slight delays and better experience)

🚀 How to Run the Project

1. Make sure Python is installed on your system
2. Copy the chatbot code into a .py file
3. Open terminal or command prompt
4. Run the file using:

python chatbot.py

5. Start chatting with the bot 🎉

🧪 Example Interaction

```
C:\Program Files\WindowsAp

Welcome to VIT Smart Chatbot!
Type 'exit' to quit

You: hi
Bot: Hey!
You: my name is palak
Bot: Nice to meet you, palak!
You: hostel
Bot: Hostel available (AC/Non-AC). Very comfortable!
You: fees
Bot: Fees for B.Tech depends on category.
Enter the category (1-4) for the fees you want to know: 4
Fees is around ₹5,00,000
You:
```

🎯 Learning Objectives

Through this project, you will learn:

- How chatbots work at a basic level
- Handling user input effectively
- Designing interactive programs
- Writing clean and readable Python code

⚙️ Future Improvements

- 🔹 Add more intelligent responses
- 🔹 Use Natural Language Processing (NLP)
- 🔹 Add GUI using Tkinter
- 🔹 Connect to a database for real data
- 🔹 Add voice input/output

⚠️ Challenges Faced

- Handling different types of user inputs
- Making the chatbot interactive
- Avoiding errors in user input
- Designing clear and useful responses

📌 Conclusion

The VIT Smart Chatbot is a great beginner project that introduces the basics of chatbot development. It focuses on simplicity, clarity, and functionality, making it a strong foundation for building more advanced AI-based systems in the future.
